

Aruba presents the new IaaS solution for SAP HANA: the best environment for processing data with SAP technology

Bergamo, 20 April 2018 – Aruba S.p.A. (aruba.it), a leader in web hosting, email, certified email (PEC) and domain registration services, presents the new **IaaS solution for SAP HANA**, a Cloud service that allows you to create virtual machines on SAP supported or certified hardware, on which you can **install HANA environments** (High-performance Analytic Appliance) with the BYOL (Bring Your Own License) option.

Digital transformation assumes the mass use of data from all sorts of sources. But many businesses do not have an adequate approach to data processing, which should focus on ease and flexibility when it comes to managing this data. Against this backdrop, SAP HANA makes a new kind of approach possible, above all thanks to the power of its *in-memory* database and the option of combining information in the same system.

Building on its collaboration with DELL and VMware, historic partners of the company with recognized SAP expertise and certification, Aruba has developed the IaaS service, thus giving its customers the opportunity to benefit from SAP HANA in their own cloud. Some of the main benefits of the solution include:

Dedicated platform – A multi-tenant platform specifically designed to support large workloads and big data, combined with the ability to offer enterprise level mission-critical reliability 24x7;

Flexibility – There are different quality SSD storage options to choose from, using virtual machines to integrate the workloads of each business, in the most appropriate infrastructure, without limiting the choice of pre-installed software and hardware configurations;

Support – A highly specialized technical team is available to prevent any infrastructure issues, optimizing performance and reducing management costs;

Security – Aruba guarantees the security of its data at its data centers, including the Global Cloud Data Center, the largest technology campus in Italy, with a Rating 4 certificate (formerly Tier4);

Virtualization – High reliability with VMware ESXi Enterprise Plus 6.5, the leading virtualization software with SAP HANA certification.

Aruba's solution includes:

- Hardware certified in the official SAP matrix for the production and hardware component supported for development and testing environments;
- 64 GB to 1 TB (and over) RAM instances in certified or supported environments in which to install HANA as a BYOL option;
- Direct connection to the on-premises environment (data center or company offices);
- Disk space for backup included in the service and equal to 4 times the instance RAM, with the option to expand;

- 10 Gb/s connection with optional interface with a Dedicated Infrastructure or Private Cloud thanks to a Hybrid Link;
- The Suse Linux Enterprise for SAP Applications operating system is included in the service offered by Aruba and is a certified, standard system for SAP installation.

With the IaaS service for SAP HANA, resources can be scaled flexibly and quickly by requesting an extension to the cloud instance if you grow. This feature means customers can change how much of the service to actually use depending on the given requirements at any time, thus reducing costs and avoiding unnecessary investments before they are needed.

Aruba S.p.A.

Aruba S.p.A., founded in 1994, is the leading company in Italy for data center, web hosting, email, certified email (PEC) and domain registration services. The company manages more than 7 million email accounts, over 5 million certified email (PEC) accounts, over 130,000 physical and virtual servers and a total of more than 4.7 million customers. Aruba is also active in the key European markets including France, the UK and Germany, and is the market leader in the Czech Republic and Slovakia, with an established presence in Poland and Hungary. In addition to hosting services Aruba offers dedicated servers, housing and colocation services, managed services, digital signatures, digital preservation and smart-cards. Since 2011 it has expanded its portfolio with the Cloud services and in 2014 became the Official Registry for the prestigious “.cloud” extension. The company has a huge amount of experience in the management of data centers, with a European network capable of hosting around 60,000 racks. For further details: www.aruba.it, www.arubacloud.com
